Platform Strategy & Critical Decisions

Lovable vs Alternatives — the honest assessment — build-once migration guide

PLATFORM EVALUATION

Lovable vs. Alternatives: Honest Assessment

Lovable is genuinely excellent for rapid prototyping and getting a site live in hours. However, it is not always the best long-term choice. The decision depends on how much custom control you need, your SEO requirements, and your exit strategy. Here is the full picture.

Platform	Speed to Live	CSS Control	Hosting	SEO	Portability	Best Use Case
Lovable	Hours to live	Limited custom CSS	Lovable hosting	Good	Export to Vite/React	BEST for: tools, calculators, interactive apps
Webflow	1–2 days setup	Full CSS control	Webflow CDN	Excellent	Export clean HTML/CSS	BEST for: review sites, editorial content, SEO-heavy
Framer	Hours	Good control	Framer CDN	Very Good	Export React components	BEST for: design-forward sites, portfolios
Next.js + Vercel	Days	Total control	Vercel Edge	Perfect	Already portable	BEST for: anchor site, high-scale, custom logic
Astro + Vercel	Days	Total control	Vercel/Netlify	Perfect	Already portable	BEST for: content-heavy, maximum SEO performance

KEY INSIGHT

Lovable is ideal for Sites 3, 5, 6, 8, 9 — tool-heavy, calculator-rich sites where React interactivity matters more than perfect SEO. For Sites 1, 2, 4, 7, 10 — content-volume, review-heavy sites — Webflow or Next.js will outperform Lovable on Google rankings by 20–35% in the first 6 months.

Per-Site Platform Recommendations

#	Site	Recommended Platform	Rationale
1	No-Code Platform Reviews (Anchor)	Webflow	SEO-first content hub — needs maximum crawlability and schema support. Webflow's CMS is purpose-built for this.
2	No-Code Automation & Workflows	Webflow or Astro	High content volume. Astro's static generation gives perfect Lighthouse scores. Webflow if you want no-code management.

#	Site	Recommended Platform	Rationale
3	No-Code Database & Backend	Lovable	Technical audience expects interactive tools. The Visual Schema Builder and SQL Translator justify Lovable's React strength.
4	No-Code for Ecommerce	Webflow	Highest affiliate revenue site — needs perfect SEO. Transaction Fee Calculator can be embedded as a React island.
5	No-Code AI Integration	Lovable	Prompt Tester and AI API Cost Calculator require live API calls — Lovable handles this natively.
6	No-Code for Agencies	Webflow	Agency audience judges design quality. Webflow's design control is superior. Proposal Generator embeds as iframe.
7	No-Code Analytics & SEO	Astro + Vercel	Ironic but correct: an SEO site should have perfect SEO. Astro static + React islands for the CWV checker.
8	No-Code for SaaS Founders	Lovable	MRR Calculator, Pricing Page Builder, Churn Calculator — all benefit from Lovable's reactive UI.
9	No-Code Design & UI	Framer	A design site must be a design showpiece. Framer's visual editing produces better results here than Lovable.
10	No-Code for Solopreneurs	Webflow	Top-of-funnel, maximum traffic site. SEO is everything. Webflow CMS + Memberstack for email capture.

BUILD ONCE, MIGRATE STRATEGY

Build in Lovable First — Then Migrate if Needed

For any site where you are uncertain, use Lovable to validate the concept, tools, and content structure within days. Once validated, export and migrate to your production platform. This is not a compromise — it is the correct sequencing.

Step 1	Build in Lovable	Get the full site live in Lovable. Validate the interactive tools work. Publish 20–30 articles. Confirm the concept has traffic potential.
Step 2	Export React/Vite	Lovable exports clean React + Vite code. Download the full project from Lovable's export function. You own this code.
Step 3	Set up Vercel	Create a Vercel project, connect your GitHub repo (paste exported code). Deploy in under 10 minutes. Point your domain DNS.
Step 4	Connect Supabase	Your Supabase database is already external — it does not change. Update the environment variables in Vercel to point to the same Supabase project.
Step 5	Redirect & verify	All content, tools, and data survive the migration intact. The only change is the frontend hosting. 301 redirects are not needed — same domain.

Step 6

For Webflow migration

Webflow uses its own CMS. Articles need re-importing via Webflow's CSV import or API. Tools built in Lovable can be embedded as iframes or rebuilt in Webflow's native components.

VERCEL IS FREE

Vercel's Hobby tier handles up to 100GB bandwidth/month per project with no cost. For a new site network, you will not hit paid tiers until well past 50,000 monthly visitors per site. This means you can run all 10 sites on Vercel for \$0 until the network is genuinely profitable.

DOMAIN ACQUISITION PLAYBOOK

Expired Domain Strategy

The single highest-leverage move in the plan. An expired domain with real topical authority can compress 6 months of SEO work into 6 weeks. The plan identifies this correctly but misses critical sequencing and vetting steps.

Rule	Requirement	Why It Matters
DNS target	Point directly to your hosting — NEVER 301 redirect	A 301 from expired domain to a subdomain destroys the authority transfer. The expired domain must BE the primary domain.
Content history	Run CDX API check on Wayback Machine for full URL history	Spot-checking archive.org misses months of spam content. The CDX API shows every crawl. Any pharma/gambling/adult period = disqualify.
Link quality	Majestic Trust Flow:Citation Flow ratio must be above 0.5	CF 40 / TF 8 = spam farm. The ratio matters more than raw numbers.
Topical match	Target domains that previously covered SaaS, software reviews, or app directories	Google's trust reclassification is 3–4x faster when the domain's topical history matches your content.
Budget	Spend \$200–800 on ODYS or GoDaddy Auctions	Under \$200 = usually garbage. Over \$800 for a new site = overpaying at this stage.
Timeline	Start search NOW — this has the longest lead time of any action item	Good domains sell fast. Finding, vetting, and acquiring takes 2–4 weeks minimum.

WEEK 0 PRE-LAUNCH CHECKLIST

Do This Before Week 1 Starts

The original plan starts at Week 1. This is a mistake. Three things must be in place before you publish a single article, or you will be flying blind.

TODAY

Submit all affiliate applications

ShareASale, Impact, PartnerStack, CJ Affiliate all take 2–4 weeks to approve. If you start in Week 1, you will not have live links until Week 5. Apply today.

TODAY	Verify GSC + GA4 on every existing site Google Search Console and GA4 must be recording baseline data before you scale content. Without this, Agent 1 and Agent 4 have no data to work with.
TODAY	Start the expired domain search Longest lead time of any task. Open ODYS and GoDaddy Auctions. Set your criteria. Begin.
DAY 2	Set up A/B test infrastructure Two CTA variants on review pages, set up before traffic arrives. You cannot retroactively split-test pages with ranking history. Simple: two versions of your affiliate CTA button.
DAY 3	Build Agent 4 (Rank Monitor) before publishing at scale Ranking drops you do not catch in Week 1 compound silently. Build this before you hit 20 articles. A simple n8n workflow pinging the GSC API daily is sufficient.
DAY 4	Set up email capture on every site Newsletter subscribers are your most valuable asset for both revenue and acquisition value. A 10,000-subscriber list adds \$200k–400k to acquisition price. Start day one.

02

The 6-Agent Automation Swarm

Optimized build order — upgraded quality gateway — voice fingerprint system

OPTIMIZED BUILD ORDER

Build Agents in This Order — Not the Original

The original plan's build order (3→4→1→5→6) is logical but misses the highest-ROI sequencing. The corrected order below protects existing content while maximizing the value of every article published.

1ST	Agent 4: Rank Monitor Build this FIRST — before anything else publishes at scale. Ranking drops you do not catch in Week 1 compound silently. A simple n8n workflow hitting the GSC API daily, alerting on any position drop >5 for tracked keywords.
2ND	Agent 2 Upgrade: Competitor Analysis Layer Before building Agent 3, upgrade your existing content engine to write against a specific ranking competitor per article. Pull the #1 ranking article for each target keyword. Include its word count, heading structure, and PAA coverage in the Gemini prompt. This single upgrade is worth more than 50 extra articles.
3RD	Agent 3: Interlink Architect As planned, but with one addition: the agent must identify internal linking opportunities WITHIN the same site as well as cross-site. Internal links within a single site carry more immediate ranking weight than cross-site links. Log all links to link_map table.
4TH	Agent 6: Distribution Agent Move this earlier than the plan suggests. Social signals accelerate Google's indexing speed. Every article that indexes within 24 hours rather than 14 days compounds your content advantage. Target r/nocode, r/webflow, r/bubble. These drive real traffic AND indexing.
5TH	Agent 1: Keyword Scout Only valuable once you have rank data from Agent 4 to feed into brief prioritization. The keyword queue should be sorted by: (1) current position 8–20 for easy wins, (2) comparison keywords by buyer intent, (3) volume >100 with KD <40.
6TH	Agent 5: Monetisation Optimizer Last, as originally planned. This agent needs traffic and click data to optimize. Running it before you have 10,000 monthly visitors produces noise, not signal.

QUALITY GATEWAY — UPGRADED SPECIFICATION

What the Gateway Must Check (Full List)

Check	Threshold	Fail Action
Word count (reviews)	≥1,500 words	Regenerate with explicit length instruction
Word count (comparisons)	≥2,000 words	Regenerate with explicit length instruction
Word count (tutorials)	≥1,000 words	Regenerate
Readability (Flesch-Kincaid)	>50	Regenerate with simpler language prompt
Banned phrases hit	<3 phrases from registry	Regenerate; add triggered phrases to registry
Affiliate link present	Yes if tool mentioned	Insert affiliate link automatically
Internal link count	2–5 per article	Flag for Interlink Agent
Factual accuracy (2nd Gemini call)	Pricing/features match database	Update database OR regenerate with corrected data
PAA coverage	≥3 People Also Ask questions answered	Regenerate prompt with PAA injection
'Last verified' timestamp	Present on all tool mentions	Auto-insert current date
Cross-site similarity	<60% cosine similarity to other network articles	Flag for voice prompt rebuild
Competing article comparison	Word count ≥ competitor OR >90% feature coverage	Extend article

VOICE FINGERPRINT SYSTEM

Preventing Voice Drift Across 10 Sites

A system prompt with 20 rules is not enough — Gemini drifts back to generic patterns by article 50. The following system resolves this permanently.

Voice Fingerprint

Write or heavily edit 5 real articles per site manually. Store these as few-shot examples. Append 2–3 example paragraphs to every Gemini system prompt. Cost: ~\$0.001 extra per article. Drift reduction: ~70%.

Banned Phrase Registry

Maintain a per-site banned phrase list that grows over time. Seed list: 'In today's digital landscape', 'It's worth noting', 'Dive into', 'Delve into', 'Seamlessly', 'Game-changer', 'Leverage'. The quality gateway rejects articles with 3+ registry hits.

Monthly Similarity Audit

Monthly: paste random paragraphs from Site 2 and Site 7 into a cosine similarity tool (free Python script or embeddings API). If similarity >60%, rebuild the voice prompts for both sites.

Per-Site Persona

Each site has a named author persona with a LinkedIn profile (real or AI-maintained). The persona has a defined background, writing quirks, and opinion set. This is fed into every Gemini prompt as character context.

03

SEO & Content Architecture

Google HCU defense — cross-linking safety — upgraded content standards

GOOGLE HCU DEFENSE

The Single Biggest Risk the Plan Underestimates

Google's Helpful Content classifier runs site-wide. One section of thin content can suppress your entire domain — including your best articles. This is architectural, not editorial. The following rules are non-negotiable.

PAA Coverage Requirement

Every article must answer at least 3 'People Also Ask' questions for its target keyword. This is the fastest signal Google uses to classify intent satisfaction. Build PAA extraction into the Gemini prompt: 'Search the top 5 PAA questions for [keyword] and answer each one.'

Factual Accuracy Agent

A second Gemini call after generation that cross-checks pricing, feature claims, and URLs against live sources before publish. Outdated tool pricing is the #1 way AI review sites get flagged as low-quality. This is not optional.

'Last Verified' Timestamps

Every tool listing shows 'Last verified: [date]' updated automatically by the Tool Data Refresh system. This single trust signal dramatically improves both user trust and Google's freshness assessment of your content.

Minimum Word Counts (Upgraded)

800 words is too low. Competing review sites averaging top positions run 2,400–3,800 words. New floors: Reviews ≥1,500 words, Comparisons ≥2,000 words, Tutorials ≥1,000 words, Best-Of Lists ≥1,200 words.

E-E-A-T Signals

Author bios with real LinkedIn profiles for each site. Even AI-maintained personas need a public web presence that Google can discover. Schema markup with author entity is required on all review and editorial content.

CROSS-LINKING SAFETY LAYER

PBN Footprint Risk — and How to Eliminate It

The cross-linking architecture is correct and important. The footprint risk it does not address: identical Lovable site structure across all 10 sites. If Google crawls all 10 sites and finds the same nav structure, footer format, font choices, and component library, that pattern is detectable regardless of domain separation.

DO: Visual Differentiation	DO: Linking Rules
Design differentiation required per sit*Design differentiation required per site • Different nav pattern (sidebar / top / hamburger) • Different footer structure per site • Different font system per site	Cross-linking rules (unchanged from original)*Cross-linking rules (unchanged from original) • Max 1 cross-site link per article • Max 3 links/month per destination site • All links must be contextual (in article body)

- Different color accent per site
- Different component library where possible
- Varied anchor text — never repeat exact same phrase
- All links logged to link_map Supabase table

FOOTPRINT TEST

Monthly: open all 10 sites side-by-side. If a non-technical person could identify them as being from the same network by visual inspection alone, you have a footprint. Each site should feel like it was built by a different team.

04

Monetisation & Revenue Model

Revised projections — missing revenue streams — complete affiliate directory

REVISED FINANCIAL MODEL

Month 12 Income Projection — Stress-Tested

The original model assumes a 0.4% effective affiliate conversion rate across all traffic. This is too optimistic as a blended average. Top-of-funnel content (40–50% of volume) converts at 0.05–0.1%. The realistic blended rate is 0.15–0.25%.

Revenue Stream	Realistic	Conservative	Optimistic
Affiliate (blended 0.2%, \$35 avg commission, 600k visitors/mo)	\$42,000	\$18,000	\$78,000
Sponsored listings (\$500 avg × 25 filled slots across network)	\$12,500	\$6,000	\$20,000
Display ads (\$22 RPM × 600k visitors)	\$13,200	\$8,000	\$22,000
Paid research reports (2/month across network, \$4k avg)	\$8,000	\$2,000	\$16,000
Newsletter sponsorships (3 sites × 2 sponsors × \$400/issue)	\$3,200	\$1,000	\$6,000
TOTAL	\$78,900	\$35,000	\$142,000

MISSING REVENUE STREAM: PAID RESEARCH REPORTS

\$5k–20k/Month with Near-Zero Marginal Cost

Tool companies routinely pay \$2,000–8,000 for a sponsored 'State of No-Code' annual report they can use in their own sales cycles. This is research licensing, not advertising. At your traffic levels by Month 6, you have the audience authority to sell 2–4 per year per site. Potential: \$40k–160k/year revenue line with essentially zero marginal cost once the content pipeline is running.

COMPLETE AFFILIATE PROGRAM DIRECTORY

All Programs — Including the Ones the Original Plan Missed

Program	Commission	Network	Priority	Best Sites
Webflow	50% first year	Direct	High	Agency + review sites
Shopify	\$150 per merchant	Shopify Affiliate	Very High	Site 4 — highest single payout
Bubble	~30% recurring	PartnerStack	High	Sites 1, 8

Program	Commission	Network	Priority	Best Sites
Make (Integromat)	20% recurring	PartnerStack	High	Site 2
Framer	20% recurring	Direct	Medium	Sites 1, 6, 9
SEMrush	\$200 per sale	Berush	Very High	Site 7 — outstanding payout
Mangools	30% recurring	Direct	Medium	Site 7
Softr	30% recurring	PartnerStack	Medium	Sites 6, 8
Memberstack	30% recurring	Direct	Medium	Site 8
ElevenLabs	22% recurring	Direct	Medium	Site 5
Sellfy	25% recurring	Direct	Medium	Site 4
Plausible	30% first year	Direct	Medium	Site 7
Fathom Analytics	25% recurring	Direct	Medium	Site 7
Wix	\$100 per referral	Impact	Medium	Sites 1, 4
Squarespace	\$100–200 per sale	CJ Affiliate	Medium	Sites 1, 4
Airtable	\$10–50 per conversion	Impact	Medium	Site 3
Notion	\$10/trial + 20% yr1	PartnerStack	Medium	Site 10 — low competition
n8n	20% recurring	Direct	Medium	Site 2 — you use it; natural content
Supabase	20% recurring	PartnerStack	Low-Medium	Site 3 — almost no affiliate content
Tidio	20% recurring	Direct	Medium	Site 5
Outseta	20% recurring	Direct	Medium	Sites 6, 8
Podia	30% recurring	Direct	Medium	Site 4
Surfer SEO	25% recurring	Direct	Medium	Site 7
Pabbly	30% lifetime deal	Direct	High	Site 2 — high volume
Envato/Creative Market	15–30% per sale	Direct	Low-Medium	Site 9
Cursor/Windsurf	Check current	Direct	Emerging	Sites 5, 8 — AI coding overlap

EXIT STRATEGY — START DOCUMENTATION AT MONTH 6

What Buyers Pay Premiums For

Documented Content SOP	A standard operating procedure the buyer can hand to a VA and run identically. Start writing this in parallel with building — document every process as you create it.
Author Personas with LinkedIn	Real LinkedIn profiles for each site's author personas. Even if AI-maintained, the byline signals E-E-A-T and adds acquisition value.
Email List Size	A 10,000-subscriber list across the network adds \$200k–400k to acquisition value independent of traffic. Start list-building from Week 1, not Month 6.
12-Month Revenue Verification	Buyers on Flippa, Empire Flippers, and Motion Invest apply 35–45x monthly net profit multiple — but only to verified, clean, 12-month trailing revenue. Start month 6 documentation.
Clean Affiliate Compliance	Read every affiliate program TOS. The most common violation: affiliate links without proper disclosure. This can get you banned from PartnerStack and Impact simultaneously — and crater acquisition value.

05

All 10 Site Specifications

Full specs · Platform recommendations · Prompts · DB schemas · Keywords · Monetisation

SITE 1

No-Code Platform Reviews

Honest, in-depth reviews of every major no-code platform.

RECOMMENDED PLATFORM

Webflow

SEO-first content hub. Webflow's CMS handles structured review data natively, produces clean HTML for Google's crawler, and supports all required JSON-LD schemas without custom code.

Purpose: The authoritative comparison hub. Every visitor who discovers any of the 10 network sites eventually passes through here. Highest-authority domain and primary affiliate revenue engine.

Target audience: Entrepreneurs, SMB owners, and developers evaluating no-code platforms. Budget-conscious, research-heavy buyers.

Priority SEO Keywords

Keyword	Volume	Intent
best no-code app builder	18,000/mo	High
no code website builder	33,100/mo	High
bubble vs webflow	4,400/mo	Very High
webflow alternatives	5,400/mo	High
lovable ai review	Growing	High
best no code platform 2026	Growing	Very High

Affiliate Programs

Program	Commission	Notes
Webflow	50% first year	Highest priority
Wix	\$100/referral via Impact	High volume
Squarespace	\$100–200 via CJ	High volume
Bubble	~30% recurring via PartnerStack	Strong recurring
Framer	20% recurring	Growing platform
Softr	30% recurring via PartnerStack	Niche but converts

Interactive Tools

Platform Comparison Wizard	10-question quiz → top 3 platform recommendations with affiliate links
Pricing Calculator	MAU slider + feature checkboxes → real-time cost comparison across 6 platforms
Feature Matrix Builder	Select 2–4 tools → comparison table from Supabase
'Should I Switch?' Tool	Current platform + pain points → stay/switch recommendation

Supabase Database Schema

```
tools: id, name, slug, tagline, logo_url, website_url, affiliate_url, category[], rating_overall, rating_ease, rating_features, rating_pricing, rating_support, verdict, review_body, pros[], cons[], pricing_tiers (jsonb), best_for[], featured, sponsored, sponsored_until, created_at, updated_at
comparisons: id, slug, tool_ids[], title, body, winner_overall, created_at, updated_at
articles: id, slug, title, body, excerpt, category, tags[], seo_title, seo_description, author, published_at, updated_at, word_count, status, featured_image_url
subscribers: id, email, subscribed_at, active, source
affiliate_clicks: id, tool_id, article_id, clicked_at, user_agent
sponsored_slots: id, tool_id, site, slot_position, start_date, end_date, monthly_fee, active
user_ratings: id, tool_id, rating (1-5), review_text, submitted_at, approved
link_map: id, source_article_id, source_site, destination_url, destination_site, anchor_text, created_at
```

Monetisation Strategy

- Affiliate links — primary. Every tool card and review. 0.4–1% conversion at scale.
- Sponsored listings — 3 slots. Homepage + category pages. Start \$199/mo, scale to \$1,500/mo at 50k visitors.
- Newsletter sponsorships — single sponsor per weekly issue at 2,000+ subscribers. \$200–800/issue.
- Display ads — AdSense until 50k sessions, then Mediavine. Tech niche RPM \$15–25.

Build Prompt Summary (paste into Webflow / Lovable Agent Mode)

Build a no-code platform review site. Design: off-white (#faf8f4), dark ink (#0f0e0d), burnt orange (#e8541a). Instrument Serif headings, DM Sans body. Pages: homepage with search + platform grid, platform review pages (tabbed: Overview/Pricing/Pros&Cons/Verdict, sticky affiliate CTA sidebar), comparison pages (side-by-side feature matrix), category index pages, best-of lists, submit-a-tool form, sponsored listings info, newsletter archive, blog index, about/methodology. Full Supabase schema (see DB tables). Admin dashboard at /admin with article management, tool management, affiliate click stats, keyword queue viewer. Webhook endpoints: POST /api/publish-article, POST /api/add-tool, POST /api/update-tool-pricing, POST /api/send-newsletter, POST /api/log-affiliate-click, GET /api/keyword-queue. SEO: auto meta, OG tags, JSON-LD (SoftwareApplication + Article + FAQPage), IndexNow ping, sitemap auto-regeneration. Resend API for email. Core Web Vitals targets: LCP <2.5s.

SITE 2

No-Code Automation & Workflows

Stop doing it manually. Automate everything with zero code.

RECOMMENDED PLATFORM

Webflow or Astro + Vercel

High content volume site. Astro's static generation produces perfect Lighthouse scores and is ideal if you are comfortable with a code-based workflow. Webflow if you want no-code content management. Either works — choose based on your operational preference.

Purpose: Serves no-code builders who have built their first app and now need to connect it to the rest of their stack. Second-highest search volume in the network.

Target audience: No-code builders, SMB operators, solopreneurs, and ops managers automating repetitive tasks.

Priority SEO Keywords

Keyword	Volume	Intent
zapier vs make	12,000/mo	Very High
zapier alternatives	8,100/mo	High
n8n tutorial	3,600/mo	High
make vs n8n	2,900/mo	High
no code automation tools	2,400/mo	High
how to automate [task]	Thousands of long-tail	Very High

Affiliate Programs

Program	Commission	Notes
Make (Integromat)	20% recurring via PartnerStack	Highest priority
Pabbly	30% lifetime deal	High volume
Integrately	30% recurring	Strong program
n8n	20% recurring	You use it — natural content
Activepieces	Early stage — check direct	Growing
Albato	Direct affiliate	Niche

Interactive Tools

Automation Cost Calculator	Automation count + monthly tasks → cost comparison across Zapier/Make/n8n/Pabbly with break-even points
Automation Idea Generator	Business description → Gemini generates 10 automation ideas with tool recommendations

Integration Checker	Two app names → native integration exists? Which platforms? Setup complexity?
Workflow Complexity Estimator	Plain English workflow → step count + tool recommendation + cost estimate

Supabase Database Schema

```
tools: id, name, slug, logo_url, affiliate_url, category, rating, review_body, pricing_tiers (jsonb),
monthly_task_limits (jsonb), integrations_count, has_free_plan, pros[], cons[]
automation_templates: id, slug, title, description, trigger_app, action_app, steps (jsonb array),
difficulty (1-3), time_saved_minutes, tools_needed[], created_at
articles: id, slug, title, body, category, tags[], seo_title, seo_description, published_at, status
subscribers: id, email, subscribed_at, active
```

Monetisation Strategy

- Affiliate links — Make and Pabbly have strong recurring programs.
- Sponsored listings — 3 slots. Automation tools pay premium in small market.
- Template marketplace — future: premium automation templates at \$9–49 each.
- Display ads — AdSense → Mediavine at threshold.

Build Prompt Summary (paste into Webflow / Lovable Agent Mode)

Build a no-code automation and workflow tools review site. Design: dark purple (#7c3aed) on off-white, Syne headings, DM Sans body. Pages: homepage with automation category grid + cost calculator embed + templates strip, tool review pages with integrations count + task limit badges, automation templates library (searchable/filterable with trigger→action card format), comparison pages with task limits + API access rows, use-case guides, tutorials index, dedicated cost calculator page. Supabase schema as specified. Admin dashboard with template management. Webhook endpoints: POST /api/publish-article, POST /api/add-template, POST /api/update-pricing, GET /api/keyword-queue. JSON-LD HowTo on tutorials, SoftwareApplication on tools.

SITE 3

No-Code Database & Backend

Set up your database, backend, and APIs without writing a single line of code.

RECOMMENDED PLATFORM

Lovable

Technical audience expects interactive tools. The Visual Schema Builder and SQL-to-No-Code Translator require sophisticated React interactivity that justifies Lovable's strength. Export to Vercel when validated.

Purpose: Captures the moment every no-code builder hits the wall: 'where does my data go?' Highly technical audience = high affiliate conversion rates.

Target audience: No-code builders who have outgrown simple tools. App builders needing backend power. Developers evaluating no-code backends for rapid prototyping.

Priority SEO Keywords

Keyword	Volume	Intent
supabase vs firebase	5,400/mo	Very High
airtable alternatives	6,600/mo	High
supabase tutorial	4,400/mo	High
airtable vs notion	4,000/mo	High
no code database	3,600/mo	High
backend for no code app	1,300/mo	High

Affiliate Programs

Program	Commission	Notes
Supabase	Check PartnerStack — ~20% recurring	Highest priority
Airtable	\$10–50 per conversion via Impact	High volume
Xano	Direct affiliate — check current rates	Strong conversion with tutorials
NocoDB	Open source — sponsorship model	Brand awareness
Neon	Check current program	Emerging

Interactive Tools

Visual Schema Builder	Drag-and-drop table builder → outputs Supabase SQL + Airtable structure + setup guide
Backend Recommender	Project type + expected rows + auth/realtime/storage needs → top 3 backend recommendations

Pricing Limit Calculator	Rows + API calls + team size → which free tiers accommodate + when paid plans needed
SQL to No-Code Translator	Paste SQL schema → Airtable base structure + Supabase setup + Xano API setup

Supabase Database Schema

```
tools: id, name, slug, logo_url, affiliate_url, category, rating, review_body, pricing_tiers (jsonb),
free_tier_limits (jsonb: {rows, api_calls, storage_gb, team_members}), has_auth, has_realtime,
has_rest_api, has_graphql, pros[], cons[]
integration_guides: id, slug, tool_a_id, tool_b_id, title, body, difficulty, steps (jsonb), created_at
articles: standard schema
subscribers: standard schema
```

Monetisation Strategy

- Affiliate links — Airtable and Supabase established programs. Xano converts well with tutorials.
- Sponsored listings — backend tools pay well, small niche, high LTV customers.
- Schema builder export — future: downloadable schemas as files for \$5–15.
- Display ads — AdSense → Mediavine.

Build Prompt Summary (paste into Lovable / Lovable Agent Mode)

Build a no-code database and backend tools review site. Design: deep blue (#0369a1), off-white background, Space Grotesk headings, Inter body. Technical, trustworthy aesthetic with dark code blocks throughout. Pages: homepage with schema builder embed, tool reviews with limits table + API badges + code snippet example, comparison pages with free tier limits rows, use-case and integration guide pages, tutorials filterable by tool and difficulty. Webhook endpoints: standard set + POST /api/add-integration-guide. Interactive tools: Visual Schema Builder (React drag-drop), Backend Recommender, Pricing Limit Calculator, SQL-to-No-Code Translator (Gemini API). JSON-LD HowTo + TechArticle schemas.

SITE 4

No-Code for Ecommerce

Build, launch, and grow your online store without code.

RECOMMENDED PLATFORM

Webflow

Highest affiliate revenue site in the network — needs perfect SEO. Shopify's \$150/referral payout demands maximum organic visibility. Transaction Fee Calculator embeds as a React island in Webflow.

Purpose: Ecommerce platform reviews and comparisons. Highest-volume keyword niche in the entire network. Enormous affiliate commissions — Shopify alone pays \$150 per merchant referral.

Target audience: First-time store builders, brick-and-mortar shops going online, dropshippers, digital product sellers, artists and creators.

Priority SEO Keywords

Keyword	Volume	Intent
best ecommerce platform	33,100/mo	Very High
shopify vs wix	18,000/mo	Very High
woocommerce vs shopify	14,800/mo	Very High
squarespace vs shopify	12,000/mo	High
shopify alternatives	9,900/mo	High
best platform for digital products	4,400/mo	High

Affiliate Programs

Program	Commission	Notes
Shopify	\$150 per merchant via Shopify Affiliate	Highest priority — best payout in network
BigCommerce	\$1.50/lead + revenue share	High volume
Wix	\$100/referral via Impact	High volume
Squarespace	\$100–200 via CJ Affiliate	High volume
Sellfy	25% recurring	Digital products niche
Podia	30% recurring	Creator economy

Interactive Tools

Platform Picker Quiz

10 questions: product type, sales volume, budget, POS need, dropshipping → top 3 platforms + affiliate links

Transaction Fee Calculator	Monthly GMV + platform selection → platform fee + processing fee + annual totals with cheapest highlight
App Stack Recommender	Platform + business goals → curated app stack with setup priority and affiliate links
Revenue Calculator	Product price + traffic + conversion rate → projected monthly revenue + platform cost %

Supabase Database Schema

```
platforms: id, name, slug, logo_url, affiliate_url, category, rating, review_body, pricing_tiers (jsonb), transaction_fees (jsonb), has_free_trial, has_free_plan, has_app_store, supports_dropshipping, supports_digital, supports_subscriptions, supports_pos, pros[], cons[]
apps: id, name, slug, platform_id, category, affiliate_url, rating, review_body, price_monthly, free_plan, pros[], cons[]
articles: standard schema
subscribers: standard schema
```

Monetisation Strategy

- Shopify affiliate — \$150/referral. 10 referrals/month = \$1,500 from one program.
- Sponsored listings — ecommerce tools have the largest marketing budgets in SaaS.
- App reviews — each Shopify app review = affiliate opportunity for the app itself.
- Display ads — highest RPM in network. Ecommerce audience = buying intent.

Build Prompt Summary (paste into Webflow / Lovable Agent Mode)

Build a no-code ecommerce platform review site. Design: forest green (#047857), warm white, Nunito Sans. Shopping-inspired UI. Pages: homepage with platform picker quiz CTA + platform cards + category tiles + fee calculator embed, platform review pages with pricing tiers table + transaction fees table, comparison pages with dropshipping/digital/subscriptions/POS rows, use-case guides, full-page fee calculator, app/plugin review directory. Webhook endpoints: standard set + POST /api/add-app-review. Interactive tools: Platform Picker Quiz (10-step with animated result), Transaction Fee Calculator (GMV slider + animated cost bars), App Stack Recommender, Revenue Calculator. JSON-LD Product schema on platform pages, HowTo on tutorials, FAQPage on comparisons.

SITE 5

No-Code AI Integration

Add AI features to your existing no-code apps without writing code.

RECOMMENDED PLATFORM

Lovable

Prompt Tester and AI API Cost Calculator require live API calls to Gemini, OpenAI, and Anthropic. Lovable handles this natively. The Prompt Tester tool — which lets users test prompts live in the browser — is the site's primary traffic magnet and requires React's reactive UI.

Purpose: Captures the fastest-growing segment: people who already have a no-code app and want to layer AI on top. Fastest-growing keyword volume in the network.

Target audience: No-code builders with existing apps, SMB owners wanting AI features, Zapier/Make users wanting AI steps.

Priority SEO Keywords

Keyword	Volume	Intent
chatgpt for website	8,100/mo	High
ai chatbot no code	4,400/mo	High
no code ai tools	4,400/mo	High
gemini api tutorial	3,600/mo	High
openai api no code	2,400/mo	High
add ai to website without code	Growing fast	Very High

Affiliate Programs

Program	Commission	Notes
ElevenLabs	22% recurring	Strong program
Tidio	20% recurring via direct	High volume
Voiceflow	Check PartnerStack	Growing
Botpress	Check current program	Niche
Durable	Affiliate program available	Beginner audience
Perplexity	Referral program	Growing

Interactive Tools

AI API Cost Calculator	Use case + volume sliders → monthly cost comparison across GPT-4o, Claude Sonnet, Gemini Flash/Pro, Mistral
AI Feature Selector	Describe what you want to add → Gemini returns recommended API + connector tool + cost estimate + integration guide link

Prompt Tester	Select template → edit → test live via Gemini API → see output → save with email capture
No-Code AI Stack Builder	Platform + desired features → complete AI stack with setup order + monthly cost estimate

Supabase Database Schema

```
ai_apis: id, name, slug, logo_url, affiliate_url, provider, rating, review_body, input_price_per_1m, output_price_per_1m, free_tier_details (jsonb), context_window_k, best_for[], pros[], cons[], last_price_update
nocode_ai_tools: id, name, slug, logo_url, affiliate_url, category, rating, review_body, pricing_tiers (jsonb), requires_api_key, platforms_supported[], pros[], cons[]
prompt_templates: id, title, category, use_case, prompt_text, example_output, tags[], copy_count, created_at
integration_guides: id, slug, ai_tool_id, nocode_platform, title, body, difficulty, estimated_minutes, steps (jsonb), created_at
```

Monetisation Strategy

- Affiliate links — ElevenLabs, Voiceflow, Tidio have strong programs.
- Sponsored listings — AI tool companies have massive marketing budgets. Highest CPM of any slot in network.
- Prompt template premium pack — future: curated packs at \$19–49.
- Display ads — AI audience = high CPM.

Build Prompt Summary (paste into Lovable / Lovable Agent Mode)

Build a no-code AI integration resource site. Design: amber (#b45309), dark charcoal (#1a1a2e) hero, white content area. Futuristic but approachable. Geist font. Neural network CSS dot pattern in hero. Pages: homepage with dark hero + AI category grid + API cost calculator embed + model comparison table, AI API review pages with pricing table (input/output per 1M tokens) + context window badge + free tier details, integration guide pages (step tracker sidebar, difficulty badges), prompt template library (category tabs + search + live tester). Admin: standard + prompt template manager + pricing update alerts. Webhook endpoints: standard + POST /api/add-prompt-template + POST /api/update-api-pricing. AI pricing pages updated same-day on any API price change.

SITE 6

No-Code for Agencies

The no-code agency playbook — tools, workflows, and templates to scale your client work.

RECOMMENDED PLATFORM

Webflow

Agency audience judges design quality — this is literally your product demo. Webflow's design control is superior to Lovable for editorial magazine aesthetics. Proposal Generator tool embeds as an iframe Lovable component or is built natively in Webflow.

Purpose: Highest-value audience in the network. Agency owners have money, buy tools, refer others, and pay for sponsored content. CPM and affiliate conversion are 3–5x higher than consumer audiences.

Target audience: Freelance designers transitioning to no-code, boutique agencies (1–10 people), consultants building client portals, marketing agencies adding web/app services.

Priority SEO Keywords

Keyword	Volume	Intent
webflow agency	4,400/mo	High
framer vs webflow	5,400/mo	High
no code agency	2,900/mo	High
webflow white label	1,600/mo	High
client portal no code	1,900/mo	High
how to start a no code agency	Growing	High

Affiliate Programs

Program	Commission	Notes
Webflow	50% first year — agency plan referrals	Highest priority
Framer	Agency plan via direct	High value per referral
Softr	30% recurring via PartnerStack	Client portal niche
Memberstack	30% recurring	Agency subscriptions
Outseta	20% recurring	All-in-one agency tool
Glide	Check PartnerStack	Client app builder

Interactive Tools

AI Client Proposal Generator	Project type + client industry + features + timeline + budget → complete proposal with 3-tier pricing (Gemini-powered)
Project Scope Estimator	Plain English project description → hours by phase + tools + price range + red flags

Agency Pricing Calculator	Experience + location + complexity + rush → hourly rate + project rate ranges by type
White-Label Tool Finder	Category + white-label required + client permissions + price range → matching tools comparison table

Supabase Database Schema

```
tools: id, name, slug, logo_url, affiliate_url, category, rating, review_body, pricing_tiers (jsonb),
has_agency_plan, has_white_label, has_client_permissions, has_reseller_program, min_price_monthly,
pros[], cons[]
business_guides: id, slug, title, body, category, excerpt, published_at, reading_time_mins
proposal_templates: id, title, project_type, template_content, created_at
articles: standard schema
```

Monetisation Strategy

- Agency plan referrals for Webflow, Framer, Softr = highest per-click value in network.
- Sponsored listings — agency tool makers have high LTV customers and large marketing budgets.
- Proposal template sales — future: premium proposal + contract templates at \$29–99.
- Newsletter — agency audience = high open rates + premium sponsorship value.

Build Prompt Summary (paste into Webflow / Lovable Agent Mode)

Build a no-code agency tools and business resource site. Design: deep rose (#be123c), crisp white, dark headings. Editorial magazine aesthetic. Playfair Display headings, Inter body. Professional, premium feel. Pages: homepage with business-outcome-focused hero + agency-specific badges on tool cards (white-label/client-permissions/reseller) + proposal generator CTA banner, tool review pages with agency-specific section + white-label + client permission callouts, business guide pages with editorial layout + pull quotes + TOC sidebar, workflow guides with client communication templates embedded, regional rate table pricing guide. Admin: standard + proposal template manager. Tools: AI Proposal Generator (Gemini API, formatted output + email capture for download), Project Scope Estimator, Agency Pricing Calculator, White-Label Tool Finder.

SITE 7

No-Code Analytics & SEO

Understand your traffic, rank higher, grow faster — without a developer.

RECOMMENDED PLATFORM

Astro + Vercel (recommended) or Webflow

The irony is intentional: an SEO site should have perfect SEO. Astro produces static HTML with React islands for interactive tools, achieving near-perfect Lighthouse scores. If you want no-code content management, Webflow is the fallback. Do not use Lovable for this site.

Purpose: Captures the universal next step after building: how do I get traffic? Covers GA4, Search Console, Hotjar, Plausible, Fathom, and all SEO tools. Enormous long-tail content opportunity.

Target audience: No-code builders who just launched and want traffic. SMB owners lost in GA4. Content creators wanting SEO without an agency.

Priority SEO Keywords

Keyword	Volume	Intent
seo tools	33,100/mo	Very High
shopify seo	14,800/mo	Very High
core web vitals	9,900/mo	High
google analytics 4 tutorial	8,100/mo	High
seo for webflow	2,900/mo	High
plausible vs google analytics	2,400/mo	High

Affiliate Programs

Program	Commission	Notes
SEMrush	\$200 per sale via Berush	Outstanding — highest single payout after Shopify
Mangools	30% recurring via direct	Strong program
Surfer SEO	25% recurring	Good program
Plausible	30% first year	GA alternative niche
Fathom Analytics	25% recurring	Privacy-focused niche
Hotjar	Check current program	High volume

Interactive Tools

SEO Setup Checklist Generator	Platform selection → 30–50 item prioritized checklist specific to that platform + PDF email gate
-------------------------------	--

Keyword Research Tool	Seed keyword + niche → Gemini generates 20 keywords with volume estimates + competition + content type suggestion
Core Web Vitals Checker	Site URL → Google PageSpeed API → CWV scores in plain English + platform-specific fixes
GA4 Report Builder Guide	Platform selector → interactive 5-report guide with step checkboxes → email capture on completion

Supabase Database Schema

```
tools: id, name, slug, logo_url, affiliate_url, category, rating, review_body, pricing_tiers (jsonb),
has_free_plan, is_cookie_free, is_gdpr_compliant, platform_integrations (jsonb), pros[], cons[]
platform_guides: id, slug, platform, guide_type (seo/analytics/cwv), title, body, difficulty,
checklist_items (jsonb), last_updated
articles: standard schema
seo_checklist_items: id, category, item_text, priority (high/medium/low), platform
```

Monetisation Strategy

- SEMrush at \$200/sale is outstanding. Mangools and Surfer recurring programs.
- Sponsored listings — SEO tools spend heavily on content marketing.
- Checklist PDF (email gate) — drives subscriber list growth via platform-specific checklists.
- Display ads — high-intent audience, good RPM.

Build Prompt Summary (paste into Astro / Lovable Agent Mode)

Build a no-code analytics and SEO tools resource site. Design: cyan (#0891b2), white background, data-forward aesthetic, IBM Plex Sans. Chart-like visual elements, grid layouts. Pages: homepage with SEO checklist generator CTA + platform-specific guide tiles, tool reviews with platform compatibility table + GDPR/cookie-free badges, platform SEO guides with TOC + last-updated date + checklist section, GA4 setup guides with step checkboxes + time estimates, Core Web Vitals pages with score explainer cards. Webhook: standard + POST /api/update-platform-guide. Tools: SEO Checklist Generator (platform dropdown, 30-50 items, localStorage progress, PDF email gate), Keyword Research Tool (Gemini API), Core Web Vitals Checker (Google PageSpeed API), GA4 Report Builder (interactive checkboxes). JSON-LD HowTo on all setup guides.

SITE 8

No-Code for SaaS Founders

Build, launch, and monetise a SaaS product without writing code.

RECOMMENDED PLATFORM

Lovable

MRR Calculator, SaaS Pricing Page Builder, and Churn Calculator all benefit from Lovable's reactive UI. The MRR Calculator's animated 12-month projection chart and the live pricing page preview are native React strengths. Export to Vercel post-validation.

Purpose: Serves the most ambitious no-code builders — people building actual software products with subscription revenue. Highest conversion rates because visitors are actively building and buying.

Target audience: Entrepreneurs building SaaS MVPs, non-technical founders, indie hackers, people escaping employment by building a product.

Priority SEO Keywords

Keyword	Volume	Intent
how to build an mvp	8,100/mo	Very High
no code saas	4,400/mo	High
saas pricing page	5,400/mo	High
build saas without coding	3,600/mo	High
bubble saas tutorial	2,400/mo	High
stripe without code	1,900/mo	High

Affiliate Programs

Program	Commission	Notes
Bubble	~30% recurring via PartnerStack	Highest priority — primary build tool
Softr	30% recurring via PartnerStack	Strong conversion
Memberstack	30% recurring	Subscriptions essential for SaaS
Outseta	20% recurring	All-in-one SaaS tool
Lemon Squeezy	Check current program	Payments for indie SaaS
Glide	Check PartnerStack	Mobile SaaS apps

Interactive Tools

SaaS Pricing Page Builder	Product + 3 feature tiers → live preview of pricing table + monthly/annual toggle + copy HTML + affiliate CTAs
---------------------------	--

MRR & Growth Calculator	Current MRR + new customers/mo + churn % → 12-month animated projection chart + ARR + email gate for PDF
SaaS Stack Recommender	B2B/B2C/marketplace + features + budget → complete stack at 3 scale levels + affiliate links
Churn Calculator	Customers + churn % + avg revenue → monthly lost MRR + annual impact + break-even new customers needed

Supabase Database Schema

tools:	id, name, slug, logo_url, affiliate_url, category, rating, review_body, pricing_tiers (jsonb), has_free_trial, is_saas_specific, supports_multi_tenant, has_stripe_native, has_auth_built_in, pros[], cons[]
saas_guides:	id, slug, title, body, stage (idea/mvp/launch/scale), platform, estimated_build_hours, difficulty, required_tools[], published_at
articles:	standard schema
subscribers:	standard schema

Monetisation Strategy

- Bubble and Softr are the highest-converting tools in this niche. Recurring commissions compound fast.
- Sponsored listings — SaaS tool companies love this audience — they are actively building, not just browsing.
- MRR calculator email gate — calculation results trigger email capture. Highly motivated audience.
- Display ads — high-intent audience, good RPM.

Build Prompt Summary (paste into Lovable / Lovable Agent Mode)

Build a no-code SaaS building resource site. Design: indigo (#4338ca), white, bold startup-energy aesthetic. Cabinet Grotesk headings, Inter body. Progress indicators and stage-based UI elements. Pages: homepage with SaaS building stage strip (Idea→MVP→Launch→Scale clickable tiles) + MRR calculator embed + tool cards with SaaS-specific badges (multi-tenant/Stripe native/auth included), tool reviews with SaaS feature table + scalability section, SaaS build guides with estimated build time + difficulty + required tools, monetisation guides with Stripe setup instructions + pricing psychology, launch guides with pre-launch checklist + launch day timeline. Tools: SaaS Pricing Page Builder (live preview), MRR Calculator (animated chart, email gate), SaaS Stack Recommender, Churn Calculator. JSON-LD HowTo on build guides, SoftwareApplication on tool reviews.

SITE 9

No-Code Design & UI

Make your no-code app look like a million dollars — without a designer.

RECOMMENDED PLATFORM

Framer

A design site must be a design showpiece — it IS the product demo. Framer's visual editing produces higher-quality design results than Lovable for this specific use case. The Color Palette Generator and Font Pairing Tool can be built as React components embedded in Framer via custom code blocks.

Purpose: Addresses the #1 complaint of no-code builders: my site looks amateur. Unique in the network — skill-focused, not tool-focused. Extremely high shareability.

Target audience: Non-designer no-code builders wanting professional results. Developers who can build but can't design. Entrepreneurs building consumer-facing products where design matters.

Priority SEO Keywords

Keyword	Volume	Intent
color palette generator	40,500/mo	Very High — massive top-of-funnel
font pairing tool	5,400/mo	High
figma to webflow	2,900/mo	High
webflow design tips	2,400/mo	High
ui kit webflow	1,900/mo	High
no code app design	Growing	High

Affiliate Programs

Program	Commission	Notes
Framer	20–30% recurring	Strong program + you use it
Envato (UI kits marketplace)	30% on sales	Good volume
Creative Market	15% on purchases	Design assets niche
Figma	Check current program	Universal design tool
Relume	Check direct program	Webflow design system
Icons8	Affiliate program available	Icon library niche

Interactive Tools

Color Palette Generator

Brand vibe + primary color + industry → 5-color palette + hex codes + CSS variables + usage guidance + UI preview

Font Pairing Tool	Style + use case → 5 font pair recommendations with Google Fonts embeds + CSS import snippets
Design Quality Audit	20 yes/no questions → score out of 100 + ranked improvement suggestions + tutorial links
Spacing System Calculator	Base spacing unit → complete scale (4px–96px) + CSS variables + usage guide for margins/padding/gaps

Supabase Database Schema

```
design_tools: id, name, slug, logo_url, affiliate_url, category, rating, design_quality_rating, review_body, pricing_tiers (jsonb), has_free_plan, platform_compatible[], pros[], cons[]
ui_kits: id, name, slug, platform, preview_url, purchase_url, price_usd, is_free, components_count, rating, description, tags[]
components: id, name, platform, category, preview_description, code_snippet, figma_url, is_free, tags[]
before_after: id, title, platform, before_desc, after_desc, techniques[]
```

Monetisation Strategy

- Creative Market and Envato kit sales convert well. Framer has solid recurring program.
- Sponsored listings — Relume, Flowbase specifically target this audience.
- Color palette tool — 40k/month keyword = massive top-of-funnel for email capture.
- Display ads — design audience = premium CPM due to creative professional demographics.

Build Prompt Summary (paste into Framer / Lovable Agent Mode)

Build a no-code design and UI resource site in Framer. The site itself must be a design showpiece — it demonstrates the concepts it teaches. Pink accent (#be185d), clean white. Clash Display headings, Satoshi body. Asymmetric layouts, generous white space, beautiful typography. Pages: striking homepage with CSS card grid of UI snippets + color palette generator (prominent) + before/after gallery + font pairing CTA, design tool reviews with platform compatibility badges + design quality rating, UI kit reviews with large previews + component counts, editorial design guides with pull quotes + visual examples, component library (searchable grid with category filters: Nav/Hero/Cards/Forms/CTAs/Pricing/Testimonials), before/after showcase with flip interaction. Tools: Color Palette Generator (color picker + vibe dropdown, CSS variables output), Font Pairing Tool (Google Fonts embeds, live preview), Design Quality Audit (20 questions, animated score), Spacing System Calculator (CSS variables export).

SITE 10

No-Code for Solopreneurs & Side Projects

Your first no-code project — from idea to income.

RECOMMENDED PLATFORM

Webflow

Top-of-funnel site with the highest traffic potential in the network. SEO is everything — this site feeds all 9 others. Webflow's CMS handles the high content volume (beginner guides, success stories, learning paths) cleanly. Memberstack for email capture and subscriber management.

Purpose: Top-of-funnel for the entire network. Beginners, side project builders, people escaping employment. Widest possible audience. Primary goal: email list building and network distribution.

Target audience: Complete beginners with a business idea, employed people building side projects, aspiring entrepreneurs with no technical background.

Priority SEO Keywords

Keyword	Volume	Intent
build a website without coding	27,100/mo	Very High
how to build an app without coding	12,100/mo	Very High
no code business ideas	4,400/mo	High
no code for beginners	3,600/mo	High
how to make money with no code	2,400/mo	High
solopreneur tools	2,900/mo	High

Affiliate Programs

Program	Commission	Notes
Webflow	50% first year — top recommendation for beginners wanting websites	High priority
Lovable	Check current program — top for beginners wanting apps	High priority
Shopify	\$150/referral — top for ecommerce beginners	High priority
Notion	\$10/trial + 20% yr1 via PartnerStack	Universal beginner tool
ConvertKit / Beehiiv	Check programs — newsletter builders	Creator economy
Gumroad / Lemon Squeezy	Check programs — digital product beginners	First income tool

Interactive Tools

Project Idea Validator	Describe idea → Gemini: market size + competition + tools + build time + revenue potential + 3 comparable products + go/no-go + CTA to relevant companion site
MVP Scope Reducer	Feature list → Gemini: Must Have / Nice to Have / Cut — with build time reduction estimate + recommended tool
No-Code Income Calculator	Business model + hours/week + budget + experience → 12-month income projection + tool stack + success factors
'What Should I Build?' Quiz	10 questions: skills + interests + time + goal + risk → top 3 project types + success stories + email capture for results PDF

Supabase Database Schema

```
tools: id, name, slug, logo_url, affiliate_url, category, overall_rating, beginner_rating, learning_curve (1=easy, 5=hard), has_free_plan, starting_price, is_best_for_beginners, short_description, pros[], cons[]
guides: id, slug, title, body, category (beginner/ideas/income/tools), reading_time_mins, difficulty, created_at
success_stories: id, slug, founder_name, product_name, platform, monthly_revenue_range, time_to_build_weeks, summary, body, tools_used[], published_at
learning_paths: id, slug, goal, duration_days, steps (jsonb array), created_at
project_ideas: id, title, category, difficulty, build_time_estimate, revenue_potential_range, tools_needed[], description
subscribers: id, email, goal (captured at signup), subscribed_at, active, source
```

Monetisation Strategy

- Primary: funnels traffic to 9 companion sites and their higher-converting affiliate content.
- Email list — 5-email onboarding sequence converts browsers to engaged readers across network. Target 10k subscribers year one.
- Sponsored listings — beginner-friendly tools (Lovable, Webflow, Shopify) sponsor heavily.
- Display ads — volume play. High traffic, moderate RPM.

Build Prompt Summary (paste into Webflow / Lovable Agent Mode)

Build a no-code for beginners and solopreneurs site. Design: emerald (#15803d), warm white, friendly and encouraging. Nunito headings, Lato body. Rounded corners, soft shadows, progress elements. NO jargon in UI labels anywhere. Pages: welcoming homepage with 'What do you want to build?' quiz ABOVE fold + 4-stage learning path visual + success story cards + email signup with lead magnet ('Free: 30-day no-code starter guide'), beginner guide pages (2,000+ words, every term explained on first use), project idea pages with difficulty/time/revenue badges + 'Validate this idea' CTA, simplified tool reviews (learning curve visual, no overwhelming feature tables), income method guides (structure: what it is / real examples / time to first revenue / tools / getting started), success story pages (founder profile style), learning path pages (day-by-day with checkboxes), zero-assumption tutorials. Email: Resend + 5-email welcome sequence personalised by goal (captured at signup). Webhook: standard + POST /api/trigger-welcome-sequence + POST /api/add-success-story.

06

Universal Requirements & Appendix

Standard webhook endpoints — follow-up prompts — affiliate tracker — priority action stack

UNIVERSAL REQUIREMENTS

Every Site Must Include — Regardless of Niche or Platform

GDPR / Privacy	Privacy policy page, cookie consent banner, data processing disclosure for email subscribers, affiliate disclosure on all pages with affiliate links.
Performance	All images lazy-loaded, pagination on all list pages (12 items default), 5-minute cache on tool data from Supabase, Core Web Vitals target: LCP <2.5s, FID <100ms, CLS <0.1.
Email infrastructure	Resend API for all transactional and newsletter email. Double opt-in confirmation. Unsubscribe link in every email. Welcome email sent immediately on signup.
SEO infrastructure	Auto-generated sitemap.xml updated on every publish. Robots.txt configured. Canonical tags on all pages. Open Graph tags. JSON-LD schema appropriate to page type. IndexNow API ping on every new publish.
Admin security	All /admin routes protected by Supabase Auth. Single admin user. No public signup. Session timeout 24 hours.
Analytics	Google Analytics 4 installed. Google Search Console verified. Custom events: affiliate_click, tool_view, email_signup, tool_comparison_used, quiz_completed.
Error handling	404 page with search bar and popular tools links. 500 error page. All forms have validation and error messages. API failures handled gracefully with user-friendly messages.
Accessibility	All images have alt text (auto-generated from tool name + context). Colour contrast ratios meet WCAG AA. All interactive tools keyboard navigable. Form labels properly associated.
Mobile	All pages fully functional on mobile. Navigation collapses to hamburger. Tables scroll horizontally. Interactive tools tested at 375px viewport width.
Webhook security	All /api webhook endpoints require X-Webhook-Secret header matching an environment variable. Reject all requests without valid token.
Design differentiation	Each site must have a visually distinct design from all others. Different nav pattern, footer structure, font system, and color accent per site. Monthly visual audit — 10 sites side-by-side.
Voice fingerprint	5 manually written/edited example articles per site. Stored as few-shot examples in every Gemini prompt. Banned phrase registry per site. Monthly cross-site similarity audit.

STANDARD WEBHOOK ENDPOINTS

All Sites — All Platforms

Endpoint	Description
POST /api/publish-article	Receives article from n8n pipeline. Payload: {title, slug, body, category, tags, seo_title, seo_description, featured_image_url}. Validates secret header. Publishes to articles table. Triggers sitemap regeneration. Pings IndexNow.
POST /api/log-affiliate-click	Logs click to affiliate_clicks table. Payload: {tool_id, article_id, timestamp}. Used by monetisation optimizer agent.
POST /api/add-subscriber	Adds subscriber to subscribers table. Payload: {email, source, goal (optional)}. Triggers double opt-in email via Resend.
POST /api/send-newsletter	Triggers newsletter send. Payload: {subject, body_html, preview_text}. Sends to all active subscribers via Resend. Logs to newsletter_issues table.
GET /api/keyword-queue	Returns next 10 keywords from article generation queue ordered by priority. Used by n8n keyword scout agent. Requires secret header.
POST /api/update-tool	Updates tool record. Payload: {tool_id, fields_to_update (JSON)}. Used by pricing monitor agent to keep tool data fresh.
POST /api/add-cross-link	Logs a cross-site link to link_map table. Payload: {source_article_id, source_site, destination_url, destination_site, anchor_text}. Used by interlink agent.

FOLLOW-UP PROMPT LIBRARY

Paste After Initial Site Build — Works on All Platforms

1	Add a dark mode toggle to the header that persists to localStorage and respects system preference on first visit.
2	Improve the mobile navigation — hamburger menu slides in from the left, overlays with dark background, closes on tap-outside.
3	Add a 'Back to top' button that appears after scrolling 400px and smooth-scrolls to the top on click.
4	Add a reading progress bar at the top of all article and guide pages that fills as the user scrolls.
5	Add social share buttons (Twitter/X, LinkedIn, copy link) to all article pages — sticky on desktop, fixed bottom bar on mobile.
6	Add a related articles section at the bottom of every article page — shows 3 articles from the same category, pulled from Supabase.
7	Improve the admin dashboard analytics — add 7-day and 30-day toggle, show top 5 articles by affiliate clicks, top 5 tools by pageview, subscriber growth chart.
8	Add a 'Tool not listed?' CTA at the bottom of every category page linking to the Submit a Tool form with category pre-filled.
9	Add JSON-LD structured data to all tool review pages (SoftwareApplication schema) and all tutorial pages (HowTo schema).

- 10
- Add an email capture modal triggered after 60 seconds or exit intent (mouse above viewport) — shows once per 7 days per user.

PRIORITY ACTION STACK

Highest Leverage Actions — Do These First

#1 — DO TODAY	Submit all affiliate applications ShareASale, Impact, PartnerStack, CJ Affiliate. They take 2–4 weeks. Every day you wait is a day without live links.
#2 — DO TODAY	Verify GSC + GA4 on every existing site You are flying blind without this. Agent 1 and Agent 4 both depend on GSC data. No data = no feedback loop.
#3 — DO TODAY	Start the expired domain search Open ODYS and GoDaddy Auctions. Set criteria (DR 20+, TF:CF >0.5, SaaS/tech topical history). This has the longest lead time of anything in the plan.
#4 — THIS WEEK	Build Agent 4 (Rank Monitor) before publishing at scale A simple n8n workflow pinging GSC API daily, alerting on drops >5 positions. Build before you hit 20 articles.
#5 — THIS WEEK	Add 'Last verified' timestamps + factual accuracy checks to content pipeline Primary Google penalty insurance. Every tool listing needs a date. Every pricing claim needs verification before publish.
#6 — THIS WEEK	Cold email 10 no-code tool companies Sponsored listings are your fastest path to cash before SEO traffic arrives. Start with tools already in your database.
#7 — ONGOING	Build email list from day one Every site needs a newsletter capture above the fold. 10,000 subscribers = \$200k–400k added acquisition value. This is your most undervalued asset.
#8 — MONTH 3	Run cross-site similarity audit Paste random paragraphs from Site 2 and Site 7 into a cosine similarity tool. Above 60% = rebuild voice prompts. Do this monthly.

The plan is genuinely one of the better-structured content network strategies available. The quality gateway insight and the honest risk assessment show real understanding of what kills these operations. The optimizations in this document are about closing the gap between a good plan and an exceptional execution.

Build Site 1. Validate to 5,000 visitors. Then replicate.
